

## ABSTRACT

An anisotropically conductive connector including elastic anisotropically conductive films each having a functional part, in which a plurality of conductive parts for connection containing conductive particles and extending in a thickness-wise direction of the film have been arranged in a state mutually insulated by an insulating part. Assuming that a thickness of the conductive parts for connection in the functional part of the elastic anisotropically conductive film is  $T1$  and a thickness of the insulating part in the functional part is  $T2$ , a ratio ( $T2/T1$ ) is at least 0.9
